

# Why leave money on the table?

With the Solar Revenue Put, you can optimize your financing terms by enhancing the credit quality of your solar project.

## The Problem

Solar assets carry a multitude of risks.

Solar projects include multiple stakeholders and various risks that can be challenging to mitigate, including weather, modeling inaccuracy, construction flaws, equipment failures, availability, and others. All can have major impacts on economic returns.

## The Solution

Transfer risk to those equipped to handle it.

The Solar Revenue Put provides an investment-grade floor on energy generation, creating stable, fixed cash flows for owners and investors. Loss events due to lower than expected irradiance, snow, soiling, degradation, inverter issues are all covered. Enhance the credit quality of your solar assets with the Solar Revenue Put.
